To do this conversion the following parts are needed:

- SR20 Radiator
- SR20 Radiator hoses (or series 2 Bluebird)
- top radiator mounting brackets

How it's done:

- Drain coolant
- Remove Bluebird radiator and hoses
- Drill holes for radiator rubber 'feet' for lower mounting position in radius rod brackets (see first pic)
- Using the existing SR20 radiator brackets, extend them so they can be mounted to the Bluebird radiator support panel. (flat piece of metal, with holes drilled to bolt to radiator tab and support panel)
- Mount radiator, and bolt top brackets in place
- Connect hoses, fill with coolant
- Start motor and check for leaks
